

```

1  ✓ import os
2    from multiprocessing import Process
3
4  ✓ def child_process(): 1 usage
5      print("Child Process")
6      print("Child PID:", os.getpid())
7      print("Parent PID:", os.getppid())
8
9  ▶ ✓ if __name__ == "__main__":
10      p = Process(target=child_process)
11      p.start()
12
13      print("Parent Process")
14      print("Parent PID:", os.getpid())
15      print("Child PID:", p.pid)
16
17  💡 p.join()

```

```

Parent Process
Parent PID: 4452
Child PID: 7020
Child Process
Child PID: 7020
Parent PID: 4452

```
